

THETA-MEST THEORY

Scientology is essentially a study of statics and kinetics. If anything, it is more exact than what are called the physical sciences, for it is dealing with a theoretical static and a theoretical kinetic which are at the opposite ends of a spectrum of all motion.

One of the most valuable contributions of Scientology to knowledge is the definition of a true static. A static has no motion; it has no width, length, breadth, depth; it is not held in suspension by an equilibrium of forces; it does not have mass; it does not contain wavelengths; it has no situation in time or space. Formerly a static was defined only as a motionless object which definition is not adequate, since an object -- or a state of rest for an object -- is attained only by an equilibrium of forces and all objects have in themselves, if only on a molecular level, motion, and exist in space which is itself an integral portion of motion. Hence we see we are dealing with a higher level static.

The capabilities of the static are not limited.

The static interacts with the kinetic which is considered to be the ultimate of motion.

In Scientology, the static is represented by the mathematical symbol theta; the kinetic is called MEST.

Theta can be the property or beingness of any individual and is, for our purposes, considered to be individualistic for each individual.

MEST stands for matter, energy, space and time, and is a composite of the first letter of each. The word MEST appearing all by itself denotes the physical universe. MEST with a designation word after it designates another's universe.

The original of the Theta-MEST theory may be found in Science of Survival 1951. After the concept of the true static was reached, problems of processing began to solve much more rapidly, and the main proof of the Theta-MEST theory is its workability and the fact that it predicted an enormous amount of phenomena which, when looked for, were found to exist and which, when applied, resolved cases rapidly.

It is now considered that the origin of MEST lies with theta itself, and that MEST, as we know the physical universe, is a product of theta.

The physicist has adequately demonstrated that matter seems to be composed of energy which has become condensed in certain patterns. It can also be demonstrated adequately in Scientology that energy seems to be produced by and to emanate from theta. Thus it could be considered that theta producing energy, condenses the space in which the energy is contained, which then becomes matter. This theory of condensation is borne out by an examination of a state of aberration of many preclears who have been found to have descended down the tonescale to the degree that their own space was contracted and who were found to be surrounded by ridges and who are thus "solid" to the degree that they are aberrated. Further, they can be found to be an effect in the ratio that they are so solidified. Further, a psychotic treats words and other symbols, including his own thoughts, as though they were objects.
